DETAILED ACTION

Page 2

Election/Restrictions

- 1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - Claims 1-12, drawn to a segmented copolyester with at least one succinic anhydride side group, classified in class 525, subclass 445.
 - II. Claims 13-15, drawn to a functionalized block copolymer of polyethylene glycol and propylene glycol having more than three carboxyl groups per chain, classified in class 525, subclass 533.
 - III. Claims 16-20, drawn to a liquid polyester having at least two carboxyl groups per chain, classified in class 525, subclass 417.

The inventions are distinct, each from the other because of the following reasons:

- 2. Inventions I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions have different modes of operation. Group I is directed to modified segmented polyesters while Group II is directed to modified block polyethers.
- 3. Inventions II and III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions have different modes of operation. Group III is

Annlic

Application/Control Number: 10/693,361

Art Unit: 1712

directed to polyesters having at least two carboxyl groups per chain while Group II is directed to modified block polyethers.

Page 3

- 4. Inventions I and III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions have different modes of operation. Group I is directed to modified segmented polyesters while Group III is directed to polyesters that are not segmented and require at least two carboxyl groups per chain.
- 5. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Election of Species

- 6. This application contains claims directed to the following patentably distinct species of the claimed invention: if Group I is elected, the following election of species is required:
- a. Election as to whether a cyclic monomer or at least two cyclic monomers is required and if so, among the cyclic monomers of claim 4, 5, and 8.
 - b. Election among the species of polyalkylene succinate of claims 6 and 7,
 - c. Election among the glycol components of claims 9 and 10.

)

Application/Control Number: 10/693,361

Art Unit: 1712

If Group III is elected, election of monomers glycolide or dl-lactide and election among initiators malic acid and citric acid are required as set forth in claims 18-20.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, in Group I, claims 1, 2, 11, and 12 are generic and in Group III claims 16 and 17 are generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over

Art Unit: 1712

the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

7. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jeffrey B. Robertson whose telephone number is (571) 272-1092. The examiner can normally be reached on Mon-Fri 7:00-3:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Randy P. Gulakowski can be reached on (571) 272-1302. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
